

Overview, in our overview dashboard there is a total sales summary where the admin can see the sales summary of the month or the daily sales summary. Also the registry, which the admin can see how much money is in the registry. The recent transaction can help the admin track how much the customer paid in case there is a problem that occurs. Then there is just a small bit of info about the inventory just for a quick view.

The Sales Report section provides the admin with a comprehensive view of all sales transactions within a selected date range. In order to ensure flexibility when reviewing past and present sales performance, this feature enables the administrator to filter sales data based on specific dates. The administrator can choose a specific date or a range of dates to view sales reports for a given period. This aids in monitoring sales trends on a daily, weekly, monthly, or even annual basis. gives information about transactions that have been

refunded, such as the product in question, the reason for the return, and the amount refunded. Enables the administrator to keep an eye on common refund patterns and take appropriate action.

The Inventory Management section serves as a vital tool for tracking and managing stock levels efficiently. It offers a view of the products that are available, their quantities, and their movement within the company in real time. The administrator can use this feature to track incoming and outgoing inventory, identify low-stock items, keep an eye on stock levels, and make sure that customers can always get their hands on products.

The User Management section plays a crucial role in maintaining control over the users who have access to the system. In order to guarantee that only authorized individuals can access particular features, it enables

administrators to create, modify, and delete user accounts. Role-based access control (RBAC), which is also included in this section, enables the administrator to specify various user permission levels according to their roles and responsibilities. By entering information like name, role, administrators can add new users. For security purposes, each user is given a unique set of login credentials. Various roles, such as Administrator, Manager, Salesperson, Cashier, and Customer Support, can be assigned by administrators. Predefined permissions for each role limit access to specific features. To meet business requirements, custom roles with particular permissions can be made.

Transaction, this is where we see the transaction The Transaction Management section provides a detailed and real-time view of all financial and sales transactions within the system. It gives administrators the ability to keep an eye on and record all payments, refunds, purchases, and other financial transactions. The administrator can examine transaction patterns, confirm payments, and guarantee that all financial data is

correct and current with the help of robust filtering and reporting features.
